With 30% growth in bed supply within a year, hotel chains and investors eye hostel offerings

Segment on way to becoming key competition to budget hotel market

“The hostel market last year experienced skyrocketing growth of 32% in bed inventory, amounting to 63,632 beds in 1,766 properties across Southeast Asia. Thailand, with its prolific tourism numbers, continues to lead the sector with a 41% share. With mounting demand in the sector, there is no sign of deceleration as investment is being embraced by an increasing number of hospitality groups and institutional investors.

In past years, hostel developers maximized profits by developing properties with high bed inventory and no private rooms. However, micro-private rooms in hostels are becoming essential and impactful to rate yields. This can best be seen in the growth of hostels with private rooms in Indonesia, Thailand and Vietnam which now exceed 50% of overall room inventory.

Trends

- Laos leads regional supply growth with a 58% increase in bed inventory y-o-y, followed by Cambodia and Malaysia at 52% and 43%, respectively.

- Conventional hotel companies investing into the hostel sector, highlighted by Lub d which is region’s largest/fastest growing hostel group.

- Despite influx of capital into branded hostels, independent properties remain predominant in the market with soaring y-o-y growth of 87%.

Forward Outlook

- Current government rules and regulations for opening hostels are not clearly defined but are increasingly coming under scrutiny due to growth of shared economy products (i.e. Airbnb).

- Growth of hostel supply in leisure destinations reflecting high demand for budget travelers and changing taste for experiential accommodation.

- Micro accommodation is shifting products, as privacy is becoming indispensable for hostels, and exponential growth in private rooms.
